Range Extender

nRF21540

Description: The nRF21540 is an RF front-end module (FEM) that improves range and connection robustness for Nordic's nRF52, nRF53 and nRF54 Series SoCs. The nRF21540 is a complementary device operating as a 'plug-and-play' range extender with the addition of just a few external components. The nRF21540's 13 dB RX gain and low noise figure of 2.7 dB, coupled with up to +21 dBm TX output power, ensure a superior link budget boosting the range of supported SoCs by between 6.3 and 10×. The RF FEM suits all applications that require increased range and/or robust coverage. In demanding RF environments, or where the application is operating close to the range limit, it can be more energy efficient to use the nRF21540 than continuously resend packets.

Operation: The nRF21540 supports Bluetooth LE, Bluetooth mesh, Matter, Thread, Zigbee and 2.4 GHz protocols. The RF FEM's TX output power is dynamically adjustable and can be set to comply across all geographical regions. The RF FEM can be used with Nordic's extended temperature-qualified nRF5340, nRF52833 and nRF52820 SoCs in industrial applications.

Output power

Adjustable in small increments up to +21 dBm

Receive gain and noise figure ratings

13 dB receive gain. 2.7 dB noise figure

Input supply

1.7 to 3.6 V

Package

4 by 4 mm QFN16

Development bundle

nRF21540 DK and nRF21540 EK. The EK is a shield for use with nRF52 and nRF53 Series DKs

Applications

Asset tracking, smart home, industrial, toys, audio

Cloud Services

nRF Cloud Services

Description: nRF Cloud Services are optimized for Nordic's low power IoT Devices. nRF Cloud Services consist of nRF Cloud Location Services, and Device Management and Security Services. Both Device-to-Cloud or Cloud-to-Cloud use cases are supported. CoAP and MQTT protocols are both supported.

Services: nRF Cloud Location Services include Assisted GPS, Predictive GPS, Wi-Fi, single-cell and multi-cell, and supply accurate and power-efficient location data for IoT devices employing nRF91 Series products. The Wi-Fi feature requires a Wi-Fi scanning IC, such as one of the nRF70 Series Companion ICs. Each location feature has accuracy and power efficiency benefits, so switching between different location services during operation can be useful.

nRF Cloud Device Management enables an IoT data-as-a-service model. It acts as the single entry-point for all device data, scaling across different devices and applications. Device management includes a firmware-over-the-air (FOTA) update function, whereby modem and/or application firmware can be updated. Device management keeps IoT products in the field operating at their best to ensure the data continues to flow. The data collect feature allows devices to send both operational and application data to nRF Cloud, utilizing a unified interface that ensures the lowest power and simplest implementation. nRF Cloud Security Services provide a secure and unique identity for devices that can be used for authentication. Nordic's nRF91 Series SiPs have a cryptographically provable unique identity to verify origin during end-product manufacturing. Secure provisioning then enables an IoT device to be configured remotely with the required credentials and custom configurations. This eliminates the need for customer credential management or the need to generate keys on the factory floor — simplifying and lowering the cost of manufacture. Remote secure provisioning enables the manufacture of generic products that can be deployed and provisioned anywhere. And nRF Cloud Security Services ensure devices stay secure after deployment with the capability to rotate keys, rollout new certifications or clean credentials and configurations.
